## Version 1.19.2.8 – July 2010

### Enhancements:

#### 1. CardioLog UI

- UI alert when page views usage is at 85%.
- UI alert when page views limit is exceeded
- Report Enhancements - Page Views and Unique Users enhanced performance

#### 2. Administration

- Removed the Black List module
- Removed the IIS Log Import module
- License supports 100,000 page views per month
- License supports a single WFE
- License supports 30 days history data
- Retrieving Windows Server 2008 IPs (IP4 format)
- Support for secure SMTP with a non-default port
- Support for configuring the default email sender and subject
- Portal Tree Updates Service - enhanced performance
- MOSS Adaptor – new fields: size, editor, spid
- MOSS Adaptor – save portal structure in the file system (vs. http)
- AD Updates Service - enhanced performance and reduction of memory usage

#### 3. Installer

- Support for IIS 6/7 running in 64-bit mode

### Resolved Issues:

1. Portal Tree Updates - alert when attempting to delete entire farms
2. Portal Tree Updates - raise error on first round
3. MOSS Adaptor - folders for generic lists are not retrieved correctly
4. MOSS Adaptor - some tree items are positioned as children of deleted items
5. AD Updates Service - "Error obtaining group names. The search filter is invalid."
6. Installer fails if the SQL model database is > 10MB

## Version 1.19.2.7 - October 2009

### Enhancements:

1. CardioLog Agent:
  - Debug information for the CardioLog Agent in IE's Dev Tools and FireFox's FireBug
  - Enable/disable Alt+F12 for the agent console pop-up
  - Use server time for duration events and documents click events
2. Administration:
  - Online product activation + updates opt-out
  - Portal Tree Updates - Extended tracing
  - Usage Data Processing - Reduction of SQL transaction size for events processing
3. Installer:
  - Extended tracing

### Resolved Issues:

1. Portal Tree Updates fail for SharePoint lists with over 999,999 items.
2. IIS Log Import fails for URLs with over 450 characters.
3. CardioLog services cannot start when the CardioLog database is down
4. Error when initiating communication with SMTP server (501)
5. Portal Tree Updates fail to run with a "Duplicate URL" error.

## Version 1.19.2.6 - August 2009

### Enhancements:

1. CardioLog UI:
  - Reports – performance enhancements (SQL queries)
  - CardioLog UI trace
2. Administration:
  - IIS Logs import
  - Delete history usage data
  - Portal Tree Updates - performance enhancements (SQL indexes, queries, bulk insert)
  - Daily backup for the portal tree table
  - Collection of SQL stats for system maintenance
  - Reduced SQL transaction size for usage data processing, portal tree updates

3. CardioLog Agent:

- Register referrer for document views
- Register view events for document clicks within search results
- Support for adding custom parameters for view events (CardioLog SDK)
- Support for tracking search results in all languages

4. Installer:

- Configure NTLM authentication for the CardioLog web applications
- Removed predefined accounts for CardioLog services

5. General:

- Support for SharePoint installations with content databases hosted on multiple SQL server instances

**Issues Resolved**

1. SP2007Tree: Support for MOSS Site Collection host headers
2. SP2007Tree: Incorrect item deletion date
3. SP2007Tree: The sp2007tree log file should be limited to 8 MB
4. SP2007Tree: Catch out-of-memory exceptions
5. SP2007Tree: Enforce minimum length for portal tree (1 char by default)
6. Active Directory Updates: Support for > 100,000 users
7. Active Directory Updates: AD Schema should allow an empty memberOf
8. Configuration Wizard: Alert when removing a portal from the SharePoint 2007 adaptor
9. Configuration Wizard - Show detailed error in Wizard step 3
10. Reports: Portal Growth reports break for multiple SharePoint items
11. Reports: Landing pages - invalid bounce rate
12. Reports: Reports should filter "by type"
13. Reports: Duplicate users in the Unique Visitors report
14. Reports: Failure to create reports when the Data Processing service is running
15. Installer: Programs Shortcuts initiate self repair
16. Installer: Non default service accounts do not have a "login as a service" role
17. CardioLog UI: Validate empty criteria values in black list
18. CardioLog Agent: JavaScript error when submitting a SharePoint Search keyword with '&'

19. CardioLog Agent: Register views on URLs with different port number - as external events
20. CardioLog Agent: Register view events for search pages

## **Version 1.19.2.5 - February 2009**

### **Enhancements:**

1. Administration:
  - Automatic identification of domain name for Active Directory Updates
2. CardioLog Agent:
  - Enable\disable flag for the CardioLog Agent console debug pop-up (CTRL+F10)
3. Installer:
  - Installer detection of SQL 2008 Tools
  - x64 download links for SQL-DMO and SQLCMD
4. General:
  - Support for Windows 2008 Server

## **Version 1.19.2.4 - January 2009**

### **Enhancements:**

1. CardioLog UI:
  - Enable report filtering by non Active Directory users in Report Center
2. Administration:
  - SharePoint 2007 Configuration Wizard
  - Trace logs for the CardioLog Lite Diagnostics Service
3. CardioLog Agent:
  - Enable\disable flag for the CardioLog Agent console pop-up

### **Issues Resolved**

- Report calculations for non-default time frames are incorrectly cached

## Version 1.19.2.3 - December 2008

### Enhancements:

1. CardioLog UI:
  - "Trial" icon for trial reports in Report Center
  - Show UI errors (hidden by the "loading.aspx")
2. Administration:
  - UI for configuring reporting data cache
  - SharePoint installation detection (32-bit only) in MOSS Adaptor admin pages
  - URL Mappings for list-item "Source" URL parameter
  - URL Mappings for search center pages (default, results, advanced)
  - Changed the name of CardioLog Lite System Monitoring Service to CardioLog Lite Diagnostics Service
3. CardioLog Agent:
  - Support for tracking custom MOSS search centers
  - Full support for tracking MOSS advanced search pages
  - Full support for usage tracking in Firefox
4. Installer:
  - Support for using SQL authentication to install the CardioLog Lite database
  - Configure license on first run
5. General:
  - Support for SQL 2008 Server
