Why CardioLog Analytics for SharePoint Intranet Portals and Websites?

The first question you may ask yourself is "How can CardioLog Analytics help improve my customer's portals and websites?" Over recent years, organizations from all sectors have invested exorbitant amounts of money in the setup and implementation of their SharePoint intranet, extranet and composite applications. In order to increase user adoption, organizations need a reporting solution that is fully integrated with the sites' content and data. As a result, they can enhance their portal efficiency and value.

Specifically tailored for SharePoint's architecture, CardioLog Analytics provides accurate and insightful information about SharePoint, based on its hierarchy, taxonomy, content and user metadata. The solution is integrated for all versions of SharePoint, including Office 365 and Hybrid environments, Yammer and Sitrion.

FEATURES

Flexible Deployment Options - On-Premises and SaaS Available

Easy usage reporting - real time analytics, event tracking, path analysis, custom dashboards, automatic alerts, employee profiling and integration with AD

Drill down reports including: portal Visitors, Site Content, SharePoint Search, Site Navigation, Conversions and Audit and Administration

Designed for SharePoint - for portals and websites, including Office 365, Hybrid and On-Prem Deployments

Privacy - full ownership of data and on-premises installation

Holistic activity view - for multiple farms, websites and easy content drilldown

Extendable - through our API and SDK

Optimization - behavioral targeting, Voice of Customer Surveys, Message Bar and more
